Patton's CL141E/AT is an Industrial all in one Gigabit PoE+ injector and power booster. Our power boost technology allows low input voltages, such as 12, 24, or 48 VDC to be boosted up to the required IEEE802.3af/at PoE requirements of 55 VDC.

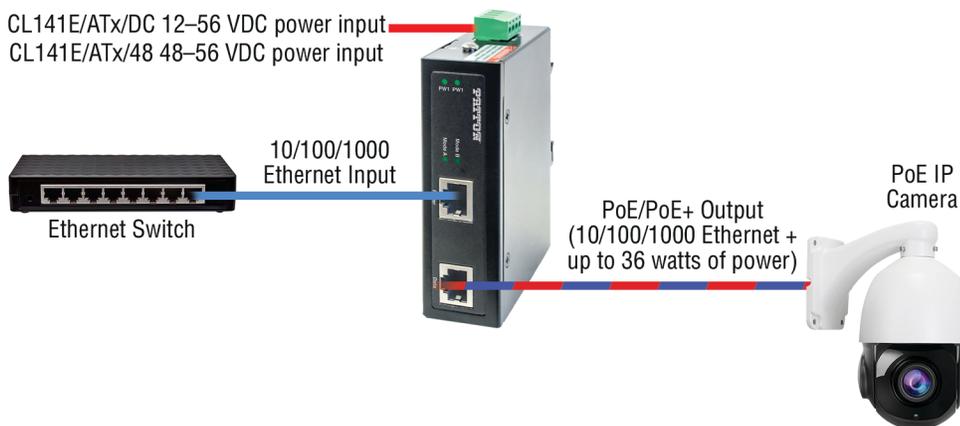

This is a perfect PoE injector for use in light industrial environments. The CL141E/AT is housed in an IP30-rated DIN-rail or wall-mount enabled enclosure, and has a wide operating temperature of -40 to 167°F (-40 to 75°C). Its rugged design, wide temperature and power input range makes it an ideal model for security, building automation, transportation and telco applications.

The CL141E/AT is very simple to use, completely plug and play. LEDs will make it clear when power is detected on the power inputs, and when PoE is being delivered. This is a PoE-compliant device, so the amount of power is negotiated automatically by the injector. Should the device you are connecting to not be PoE-enabled, the CL141E/AT will detect this and not pass power to the connected device.
