Antaira Technologies Launches a New Series of Serial to Modbus Gateways

BREA, CA – October 9, 2018 – Antaira Technologies is a global leading developer and manufacturer of industrial networking devices and communication solutions for harsh environment applications and is proud to announce the expansion of its industrial networking infrastructure family with the introduction of the **STM-60XC series of Serial to Modbus Gateways**.

Modbus networks have been around for a very long time. Markets are driving the need for Modbus RTU and ASCII devices to communicate with Ethernet and ultimately cloud devices with the help for IIoT (Industrial Internet of Things). It is this need that has prompted Antaira to take a look at Modbus Gateway technology and integrated it into the Antaira portfolio.

The new STM-601C, STM-602C, and STM-604C provide options for a wide range of applications in industrial applications including 1, 2, and 4 serial port options. All

three of these models provide dual Ethernet connections with the ability to provide unique IP and MAC addresses per port giving the devices the ability to be used in a redundant network design. The reverse polarity and overload protected redundant power inputs add the level of engineering that is expected in true industrial devices.

Antaira's **STM-60XC series** supports up to 921.6 kbps and any baud rate setting making it scalable for any Modbus RTU or ASCII network. The series of gateways also support up to 16 connections per serial port under Modbus master mode and 32 sessions under Modbus slave mode. Antaira provides a 5-year warranty to these devices further adding to these devices' features and solutions for when a need arises to get your Modbus devices connected to your company and beyond.

For more details about Antaira Technologies' industrial Modbus Gateways, please feel free to visit www.antaira.com; or contact Antaira Technologies toll-free at 1-844-268-2472.

About Antaira Technologies
Antaira Technologies is a global leading developer and supplier that provides high-quality industrial networking and communication product solutions. Since 2005, Antaira has offered a full spectrum of product lines that feature reliable Ethernet infrastructures, extended temperature tolerance, and rugged enclosure designs. Our product lines range from industrial Ethernet switches, industrial wireless devices, Ethernet media converters, and serial communication devices. Our vast professional experience allows us to deploy a wide array of products worldwide in mission-critical applications across various markets, such as, automation, transportation, security, oil & gas, power/utility, and medical.
